Copyright Agreement

The initial version of the qPALACE suite of tools, developed at the University of Southern California, originated from the SuperTools ColdFlux project, supported by the Office of the Director of National Intelligence (ODNI) and the Intelligence Advanced Research Projects Activity (IARPA), through the U.S. Army Research Office grant W911NF-17-1-0120. The new version (v2025) was developed with support from the NSF Expeditions: DISCoVER in Computing program (grant number 2124453), the DARPA SCE-FHE project, and the Army Research Laboratory (ARL) - DEVCOM FSDL ColdPhase project (contract/grant number W911NF-24-1-0317). For U.S. export compliance, qPALACE is the result of fundamental research, with its ideas and approach published in various journals and papers.

"The Software" refers to the covered work governed by this License, excluding applications or combined works as defined below. An "Application" is any work that uses an interface provided by the Software but is not based on the Software itself. Creating a subclass of a class within the Software is considered a mode of using its interface. "The Source Code" refers to the codebase of qPALACE and its subtools.

1. The software is copyrighted by the University of Southern California (USC) and Massoud Pedram.
2. The undersigned agrees not to distribute the source code or any derivatives beyond their organization without prior written approval from USC and Massoud Pedram.
3. The source code and software are provided "as is" for non-commercial use.
4. Massoud Pedram and the developers bear no liability for any use of the code.
5. The software comes with no warranties, support, or future enhancements.
6. The undersigned agrees to acknowledge ColdFlux, qPALACE, and related tools, as well as Massoud Pedram of USC, in reports or papers using the software to generate results.

Sincerely,
